Education

Vellore Institute of Technology

Bachelor of Technology in Computer Science

Nov. 2022 – July 2026

Amaravati, AP

Relevant Coursework

- Data Structures and Algorithms
- Database Management System
- Computer Networks
- Information Security
- Software Engineering
- Artificial Intelligence
- Operating Systems

Technical Skills

Languages: JavaScript, Java, Hibernate, C++, Python, CSS, SQL, NOSQL, PLSQL, HTML5, Object-Oriented Programming, Software Engineering, Typescript

Developer Tools: JPA, Web Services, Apache Tomcat, VS Code, Eclipse, Clean Architecture, CI/CD Pipelines, Microservices

Technologies/Frameworks: Linux, GitHub, Jest, Express, Spring Boot, NFC technology

Concepts : Distributed Systems, Object-Oriented Programming, Scalability, Performance Optimization, Data Structures, Algorithms

Experience

Airport Authority of India, Kalaburagi

Backend and Site Reliability Engineer Intern

March 2024 – June 2024

Gulbarga, Karnataka

- Conducted a detailed requirements analysis for DGCA compliance, documenting over 50 constraints to ensure the software architecture met regulatory standards with scalability and maintainability principles.
- Designed a modular and secure software system using microservices architecture and RESTful APIs, enabling seamless integration with existing DGCA workflows and improving flexibility for future updates.
- Improved task execution efficiency by 40% through optimized workflows and streamlined inter-departmental communication using service orchestration patterns, reducing bottlenecks.
- Applied SOLID principles in code design, ensuring maintainability, modularity, and high cohesion while adhering to agile development practices to accelerate feature delivery timelines.
- Delivered a robust, scalable solution within 3 months, aligning with DGCA's requirements and significantly reducing operational overhead, ensuring 100% compliance and usability for aviation maintenance staff.

Only Click Services - Tadepalli

Scrum Manager & Backend Developer

January 2025 - Present

Vijayawada, AP

- Designed and developed a scalable and secure backend service from scratch, supporting over 10,000 API requests per day, optimizing response times by 40%.
- Led and managed a cross-functional Scrum team of 5 developers, successfully delivering 15+ key product features within aggressive startup timelines.
- Engineered backend solutions that automated key business operations, reducing manual effort by 70% and increasing operational efficiency.
- Developed and optimized RESTful APIs, improving system interoperability and reducing frontend-backend integration issues by 50%.
- Strengthened security by implementing OAuth 2.0 authentication, data encryption, and role-based access control (RBAC), mitigating 95% of potential security vulnerabilities.
- Integrated CI/CD pipelines using GitHub Actions and Docker, accelerating deployment cycles by 80% and reducing production downtime to less than 1 hour per month.
- Applied software engineering best practices, including SOLID principles and design patterns, resulting in a 30% reduction in code complexity and maintenance overhead.
- Collaborated with the product team to refine requirements and roadmap, contributing to a 50% faster time-to-market for new features.

CSI - VIT-AP, Chapter

Scrum Manager

Sep 2023 – Present

Amaravati, A.P

- Led Scrum management, facilitating sprint planning, daily standups, and retrospectives, ensuring timely delivery of features.
- Developed core backend functionalities, including user authentication, database models, and API endpoints, optimizing performance by 30%.

- Collaborated with a cross-functional team to define project requirements, prioritize tasks, and maintain alignment with project goals.
- Integrated CI/CD pipelines to automate deployment and improve code quality, achieving faster iterations and reducing downtime.

Projects

Blockchain Transaction Classification | *Python, JavaScript, Express, Jest, reverse-engineered Algorithms* **DEC 2024**

- Developed a **five-layer classification algorithm** to identify spam blockchain transactions. awarded with 1st Place nationwide by the ministry of education and SIH team as best innovative solution.
- Designed a scalable architecture to handle large transaction volumes with minimal latency.
- Created and integrated RESTful APIs for seamless backend communication.
- Delivered impactful results by reducing costs, achieving 91% translation accuracy, and Improved blockchain security and efficiency with real-time, low-latency processing.
- Showcased innovation by combining traditional machine learning with reverse-engineering techniques to create a unique solution.

Breathalyzer Testing Application | *JavaScript, Jquery, PHP, Python, cloudflared* **March 2024**

- **app.kalaburagairports.in**
- Developed an interactive web application tailored to meet DGCA's safety protocols, ensuring staff involved in aircraft operations are not under the influence of alcohol.
- Key Features are :
 - * Department-wise login facility for secure access.
 - * Transparent selection using a randomizer algorithm to promote fairness and compliance.
 - * Safeguards to prevent multiple runs of the randomizer, ensuring process authenticity.
 - * Secure and reliable data management aligned with DGCA's record-keeping standards.
- Created Impact by minimizing the paper work of 80% and created a secured system with Reinforced regulatory compliance and enhanced the safety protocol workflow for the daily critical operations.

Access Matrix - Security Management | *JavaScript, React, Jest, Express* **August 2024**

- **logentry.kalaburagairports.in**
- Collaborated with a team to engineer a backend-driven security management system that automates user ID validation and access control for restricted zones, replacing manual checks with an efficient, automated process.
- Worked with the team to centralize data storage and enable real-time employee location tracking, ensuring accurate monitoring and compliance with security protocols.
- Assisted in reducing average waiting times in worst-case scenarios by 30%, optimizing workflow and improving overall employee satisfaction across the organization.
- Helped develop a scalable solution that streamlined zonal access management with minimal manual intervention, improving security and operational performance across the organization.

Real-Time Language Translator for Hospitals & patients | *Python, JavaScript, Express, Jest, Web Services* **Sep 2023**

- Design an user experience with an intuitive, WhatsApp-inspired interface, offering an easy-to-use platform that improves patients and doctors to communication at real-time, with a simple and effective language-switching feature.
- Achieved a breakthrough in cost-efficiency by fine-tuning pretrained models to accurately understand and translate medical terminology, reducing dependency on expensive APIs while maintaining high-quality translations tailored to the healthcare domain.
- Engineered a scalable cloud-based architecture with RESTful APIs, ensuring the solution could effortlessly handle large-scale deployments while maintaining low latency and high availability, supporting healthcare organizations at an enterprise level.
- Delivered impactful results by reducing costs, achieving 95% translation accuracy, and enabling real-time multilingual support, all while enhancing operational efficiency and driving innovation in healthcare communication technology.

Leadership / Extracurricular

1. Smart India Hackathon 2024 WINNER
2. HackathonX 2025 Semi-finalist
3. Top Performer in Academic Year 2023-24 and received Award
4. Skill Development Instructor in CSI club
5. Team Lead in community-HUB VOS open source at VIT-AP
